- ▶▶▶ The value it provides and the advantages
- ▶▶▶ Brings Personnel management and security solutions

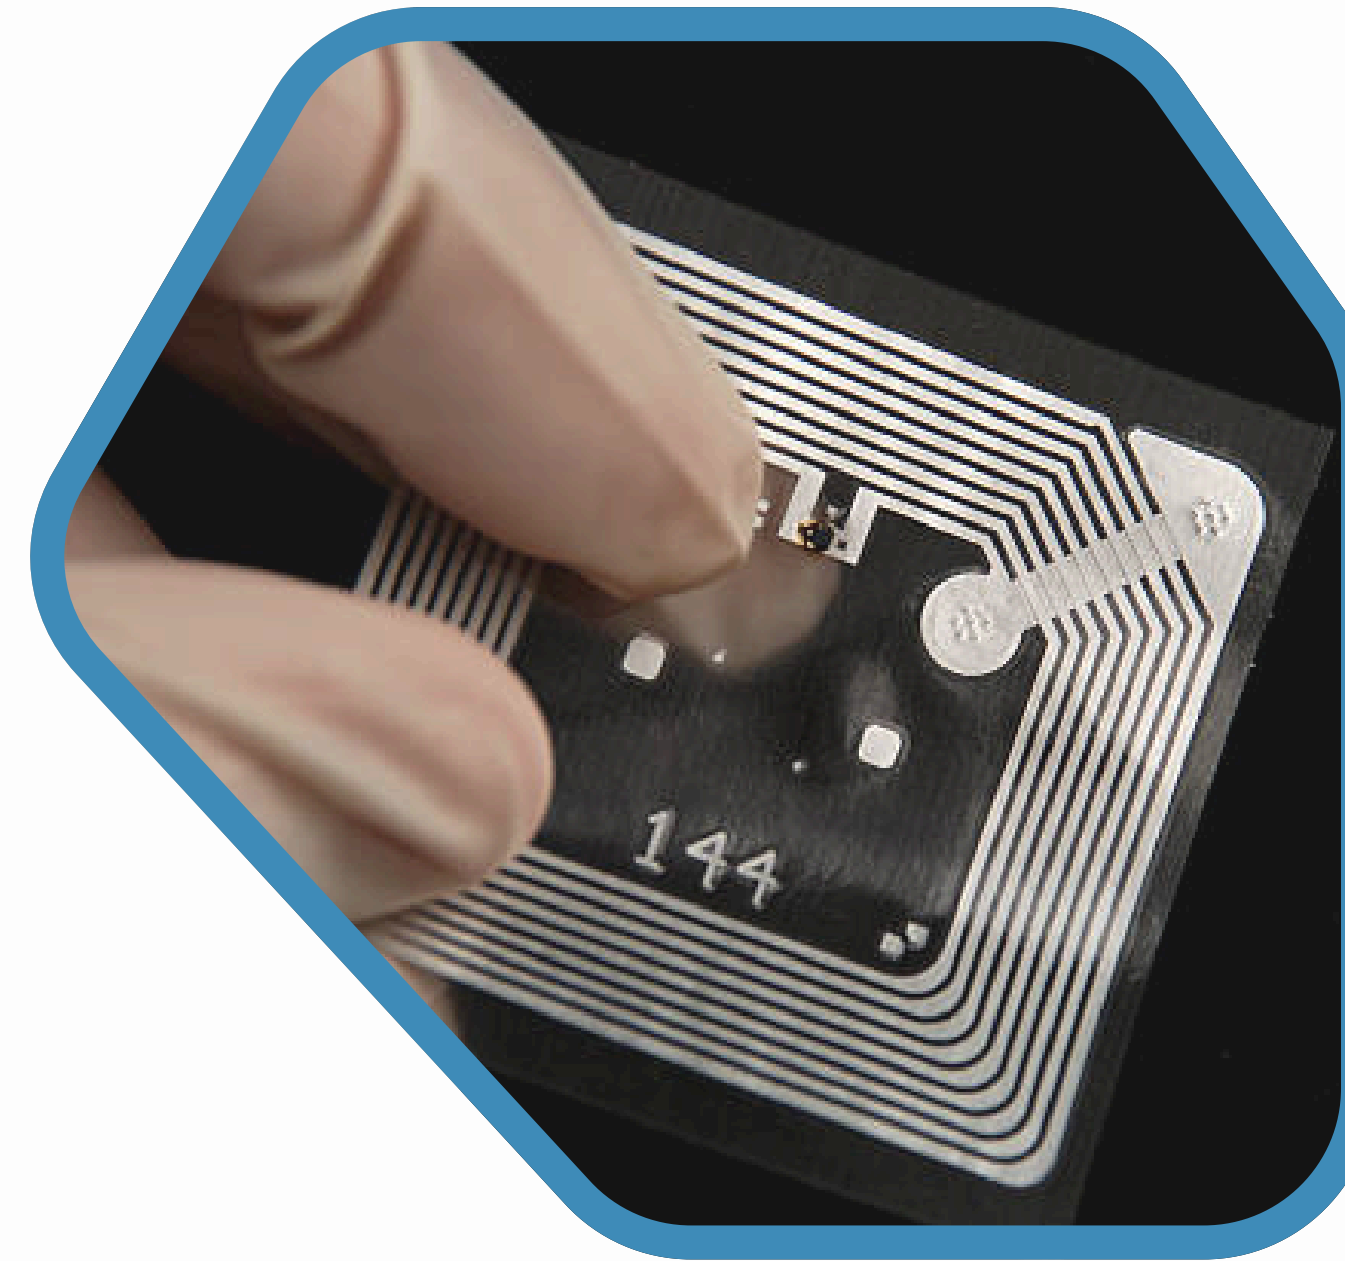

About Us

Kutar is a leading technology company founded in 2017. It aims to develop international competition in the IoT / RFID sector. As an RTLS service provider, it has adopted the principle of continuous development and growth.

What are Security Route Tracking Systems?

Technological solutions that enable real-time monitoring and management. These systems work using technologies such as GPS or RFID, allowing them to move within specified routes.

Advantages

01

Real-Time Location Tracking

It allows monitoring the real-time locations of personnel. In emergency situations, it is vital that personnel are available immediately.

02

Worker Safety and Emergency Response

It is an effective tool to improve worker safety. It helps prevent workplace accidents and ensure the safety of personnel.

03

Route Planning and Optimization

It reduces the costs of businesses while increasing the efficiency of security personnel.

04

Performance Evaluation and Reporting

It provides employers with detailed reports, allowing businesses to review their security processes, make improvements and evaluate staff performance.

How Do Security Route Tracking Systems Work?

Using technologies such as GPS or RFID, the movements of security personnel are recorded and managed through a central software platform.

Use of GPS and Mobile Technologies

Online and Offline Tracking

Timestamp and Location Information

Important Features in Security Route Tracking Systems

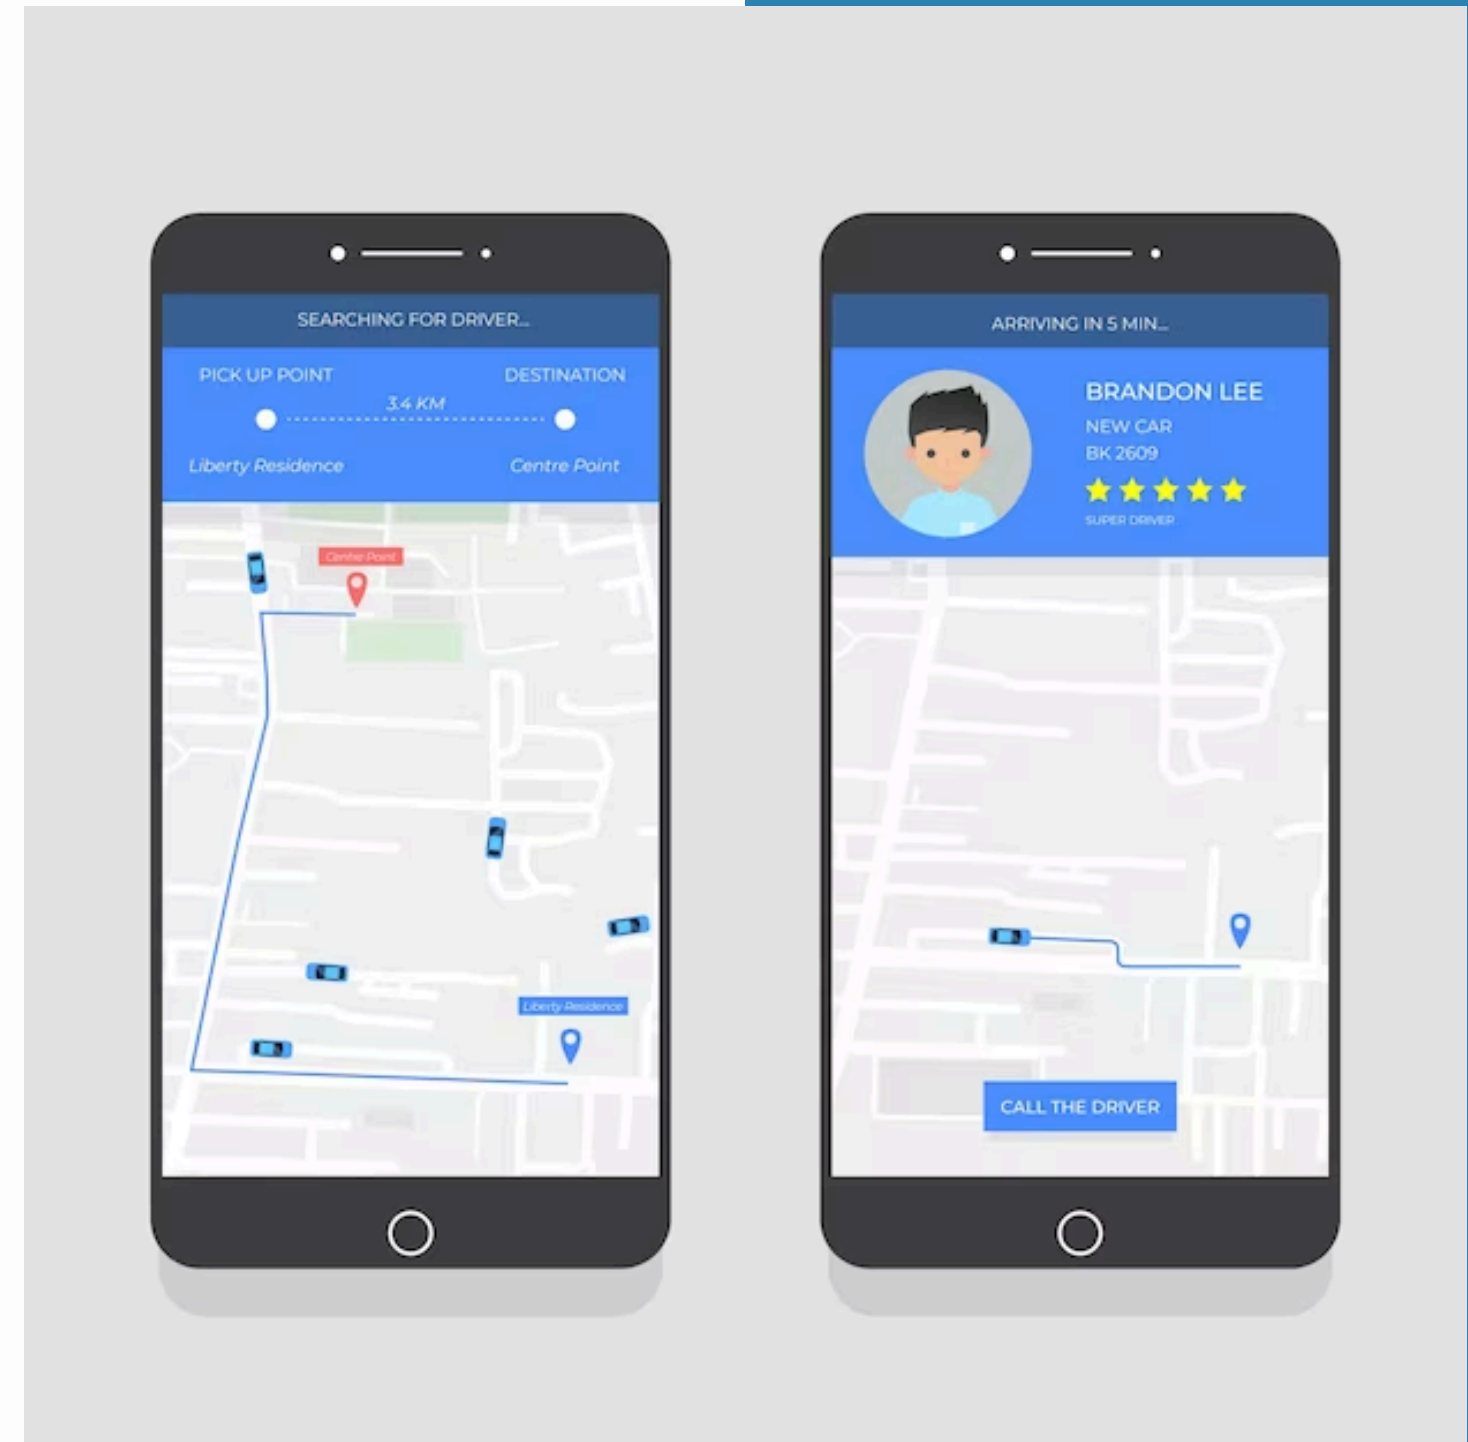

- ▶ Secure communication in infrastructure
- ▶ Instant control of multiple control points simultaneously
- ▶ Fast and effective intervention thanks to the panic button
- ▶ Double-sided verification thanks to GPS and NFC
- ▶ Easy to use regardless of area size
- ▶ Easy to use with NFC phone and simple system design
- ▶ Real-time remote control via internet or mobile phone

System Functions

Detailed Review

- ▶ Personnel Information Management
- ▶ Working Hours Tracking
- ▶ Permission Management
- ▶ Working Hours Tracking
- ▶ Route Planning
- ▶ Reporting

Application Areas of Security Route Tracking Systems

Private Security Companies

It ensures the security of customer assets and enables them to act quickly in situations requiring intervention.

Public Safety Organizations

Public safety organizations use security route tracking systems to coordinate emergency responses and manage their operations.

Industrial Facilities and Construction Projects

By tracking staff locations, it ensures that safety protocols are enforced and can also be used to record workers' working hours and track costs.

Cost and Return on Investment

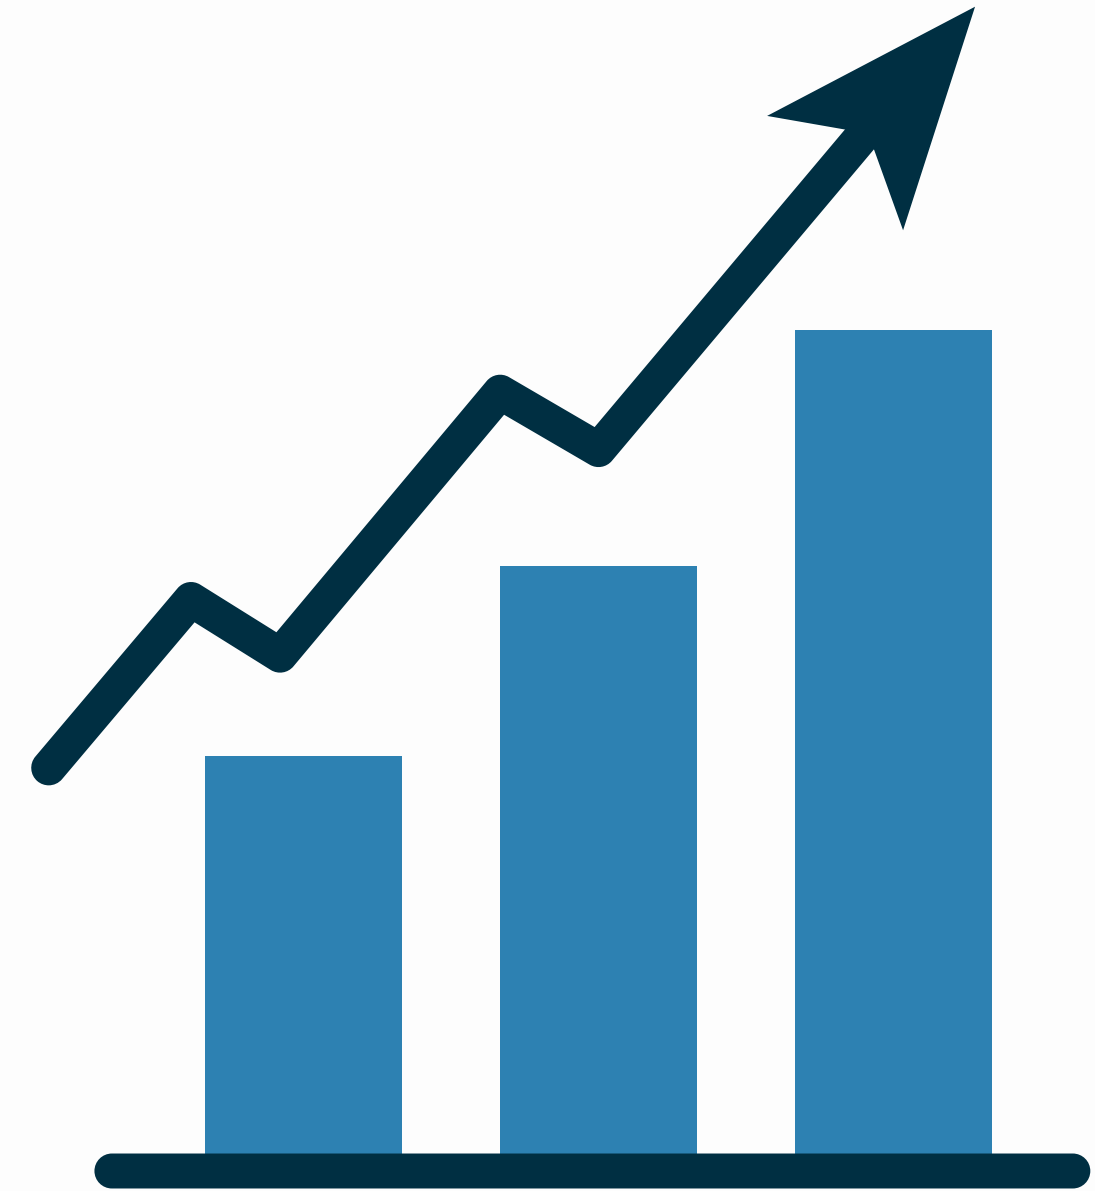

The efficiency increase and operational advantages provided by these systems can make a significant contribution to the long-term success of businesses.

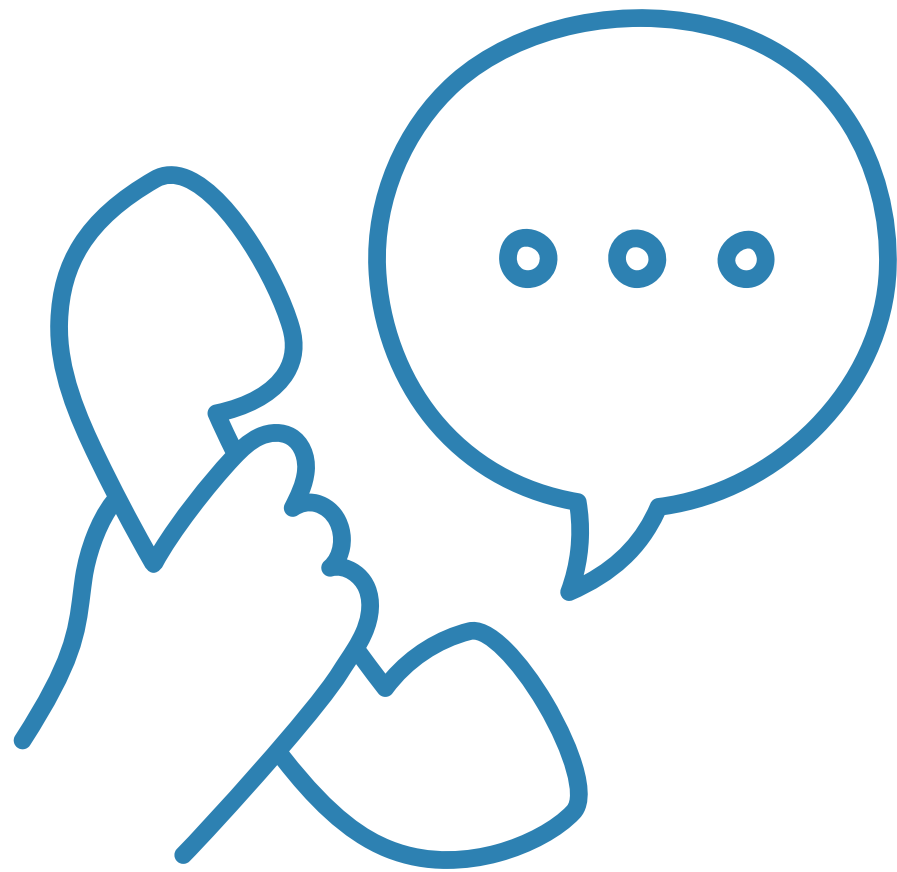

%50 to %70

Initial investment
costs

%5 to %10

Maintenance and
update costs

If you need Security Route Tracking System

- ▶ Increasing worker safety
- ▶ Increase safety standards
- ▶ Increasing operational efficiency
- ▶ Points such as reducing costs stand out
- ▶ Improve security processes and make personnel management
